

JLMS has been designed with extensive flexibility in the look and feel of the site. Different customers have different needs, and JLMS can satisfy almost any requirement in this regard with the inbuilt personalisation and customisation available. This flexibility has led to the system being so customisable, that we have created a new user type called Graphic Administrator. We recommend that this user be fluent in HTML and graphics techniques. We also recommend that we provide this customisation, and it is included as a service for initial configuration, and also for any reasonable ongoing changes.

JZero recognize that it is important that the user has a familiar as possible interface for learning and this flexibility allows us to integrate seamlessly with internal intranet system.

- A Skinning Wizard is provided to allow the most common looks to be selected from.
- Almost all colours, fonts, images and details available through the admin interface
- User's text is editable through the admin interface. This includes labels, help text and page text.
- Admin text can be easily changed by JZero on client advice through the Super Admin
- The menu layout is now fully configurable, with a user friendly interface:
 - Have menu items on top, or left side, or both.
 - Menu items can be images or text
 - The menu items are highly admin configurable.
- Menu items can be independently configured for top, bottom or both. Including:
 - Image or text Style
 - Font Size, ext and colour
 - Background styles, images, height, colour;
 - Hover styles
 - Various other attributes
- JLMS 4 now provides various help screenshots to allow you to assess what each of the different attributes will changes - a legend to help you recognise what attribute links to what onscreen item.
- Online certificates are HTML configurable via the admin interface
- System allows two separate login screen for both work and home access.
